Aim of the Game: To win all the cards.

How to Play:

Shuffle and deal out all the cards equally (leave any spare). Each player holds their cards in a pile facing towards them. Decide who will play first.

The first player reads out the name of the country. They read out their highest data value, eg: Size in km² to challenge the other players. The other players read out the name of their country and the matching data value.

The player with the highest value in that round, wins all the top cards and collects them. These are added with their own at the bottom of the pile.

It is the winner's turn next. If two or more have matching data values, these are put on the table and another round is played.

Whoever wins that round, collects all the cards. The game ends when one player has collected all the cards.
